No

668. Saltillo near Saltillo Augt (?) 1848. Vizmaga - Head about the same Size and Shape of a Large flattened (horizontally) turnip - with short stiff thorns, which as the top of the head barely rises above the surface are dangerous to the feet of Animals, Flower ~~purple~~ purplish (1/4 - 1/2 +)

669. From near Cerros Bravos (north of Saltillo) Sept 22. 1848 - Grow one joint upon another, to the length (sometimes) of Several feet. It is very difficult for Animals (especially horses) to pass among them; as the thorns sticking in their legs, the joints break off and stick to them until taken away. Found none in flower (+ - X o)

670. Below Mesilla Sept. 23. 1848 - Round Vizmaga, head Remaining half buried in the ground (1/2 +)

671. Between Saltillo & San Luis Potosi, Dec 1848. - grows in bunches, with long white, & very piercing thorns (1 - 2 X)

672. North of San Luis, Dec 20. 1848 - Broad fish-hook Vizmaga - Saw none in flower.

673. Still at Guadalupe, near Mexico, March 12. 1849 Short-jointed Cactus, Resembling) No 669 from Cerros Bravos (1/2 - 1 +).

674 Do. Do. - Do White thorns, but not so long, white nor thick as those of No 671. Saw Same, (as I think) also on road from San Luis & even north

675 Seeds of plants, Nursery, &c., from City of Mexico March & April 1849 -

---

1849 676 Tacubaya, April 26. 1849 - Cebolleta, Flowers Red (other flowers white Striped with purple, &c.)

677 Highlands west of Mexico, April 26. 1849 - Wild rose - pale red flower - Shrub - (5 - 8 +)

678. Do. Do. Do White flower - Shrub - (5 - 8 +)

679. Mountain border, Do. Do Flower Red. - Semi-Shrub (3 +)

680. Do Do Do Do Flower whitish - Shrub - (10 -)

Cane like Bamboo 4 - 5 - 6 - 8 feet high

No
1066 — Do. Do. Do — Tree with fruit (20-30-)

1067 — Do - Do. Do - Tree - whitish flower (30-) See also near Santiago June 2 -

1068 — Do. Do, Do — Shrub - flower white (3-5-)

1069 — Do. Do. Do — Zalate ? & others - with figlike fruit, all known generally among Mexicans, I believe, as higueras. What is curious and interesting about this Class of trees - three or four in number - is that they seem to grow exclusively, combined with other trees, and chiefly the palm; One of these Specimens of the Zalate (largest leaf Species) was taken from a Sprout - stuck to side of a palm, with no roots yet reaching the ground — The mode of Vegitating of this class of plants seems this: The seed is stuck upon the bark of another tree (oftenest the palm) by birds, &c - it Sprouts and the plant is sustained by the Atmosphere and what sustenance it can draw from the bark of the tree (without at all entering its Substance) until the roots reach the ground, where they take root and Spreding, finally envelope the tree upon which it is located, so Completely, often, as to enclose the trunk entirely, merely leaving the head of the palm — or upper branches of other tree - sticking out — So that the Original resembles a parasite,

1070 — Near Santiago, June 2/49 - Shrub - flower yellow (5-X)

1230- Do. Do. Do. Do - Leaves of Palo-prieto, a hard durable Wood much used for posts, & other building purposes (30-40+)

1231- Hill Do. Do. June 22 Shrub - flower yellow. milk exudes (10X0) See No 1010?

1232- Do. Do. Do. Do. Vine - flower white (10-20+)

No

1233 — Do. Do. Do. Do — Dry flower & unripe fruit from three sided Stem — Cactus flower whitish: Identically the same Species to all appearance, I have seen growing, attached to trees, sometimes at a Considerable elevation. (10-15+)

1234. — Near Mazatlan June 23/49 — Wilde Indigo with Seed (2-3+)

1235 — Do. Do. Pale pinkish purple flower (1+)

1236 — Do. Do. Blue flower (Is it same as No 969?)

1237 — Do. Do. Shrub with fruit (See Elsewhere No 1201?)

1238 — Do. Do. Vine — flower yellowish — Grr between Tepic & Santiago?

1239 — Near Mazatlan, June 22 — Organo — The smaller Specimens appear a little different; yet is it only because the plant is younger — also with the fruit not eaten, though a very similar looking fruit, from a similar Organo is eaten — Seperate Seed also with this same number — somewhat branching (10-30+)

1240 — Do. Do. Do — Woolly Organo — Have seen neither fruit nor flowers — Also Specimens from near Agua Caliente (10+)

1241 — Mazatlan to Santiago — Seeds of Plums, yellow & Green & Red

1242 — Near Rosario June 6, — "Moss"

1243 — Hill near Mazatlan — Small oval-head Cactus — grows in Clusters,

1244 — Do — Do — Common broad leaf Cactus — See No 1165.

1245 — Between Santiago & Rosario June 5 — & — Seed pods of a Vine, but saw neither flower nor Leaves.

1246 — Mts near Tepic May 29/49 — Grows on Oaks —

1247 — Mts between Mexico & Morelia — Coarse Short "Gray Moss" — Grows on Various trees —

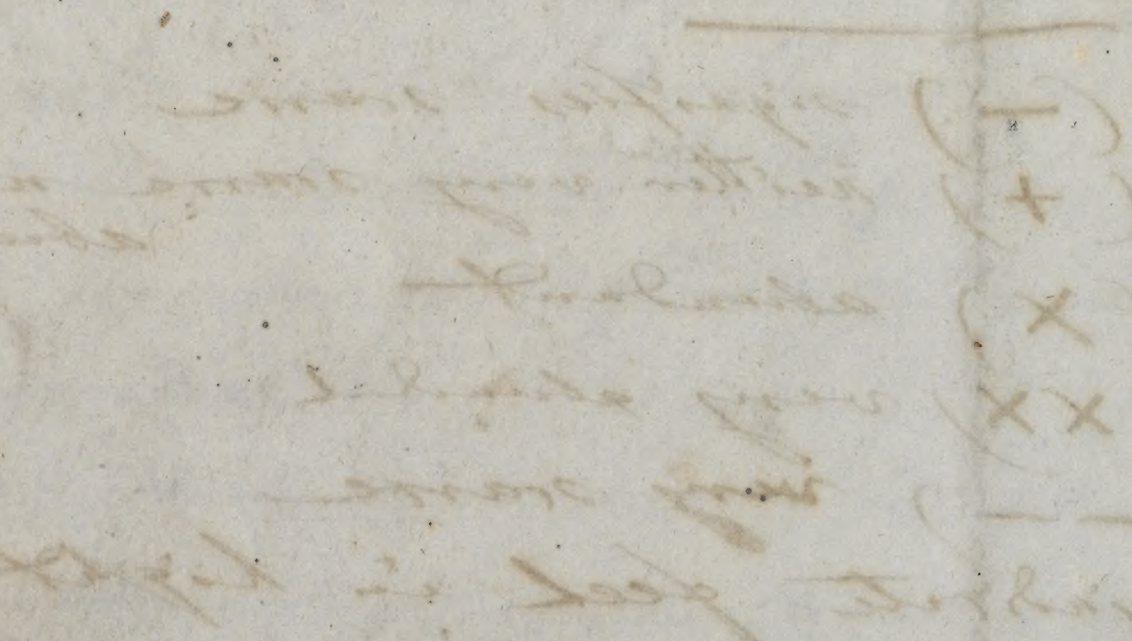
1248 — Near Mazatlan (Valley) June 26 — Long "gray moss" I have seen on but a few trees in one place; Seems to differ from that of Mississippi Valley only in being finer & dryer (3-)

4o

1249- Hills about - Victistiran, West - of Morelia, May 8.
Small Viznagas - growing on rocks, sometimes
with roots extended in Crevices, but more frequent
-ly only spread among a fine short green moss,
on the smooth surface of the rocks. (4 + o)

1250 - Barrancas, May 25/49 - of the Cactus family).

The mark (—) signifies scarce = rare.
(+) neither very scarce nor abundant
(X) abundant = common. = locally common.
(XX) very abundant = very common.
(——) very scarce = very rare.

The figures indicate feet in height
Ex. 1233. (10-15 +) = Cactus, 10-15 feet
high and not abundant, nor very rare


Sometimes the signs O and S are
used; the first for: very local and
S for scattered here and there.
